

Hi . Thank you for purchasing my product.

First, let's open the project in ae cc2017 and add the logo and background to the project.

**1)** Open the "Change Logo" folder and all the folders named "Logo". Next, open all compositions inside. Import your logo and BG, then drag them to the compositions that we opened. Set the size to fit compositions.

**2)** Now export the ae project to premiere pro. To do this, go to "window" and click Essential Graphics and in this panel, click Export Motion Graphics Template. Save under the instructions, then select "Local Drive" and in Browse we choose the place of export.

**3)** Now go to Premiere Pro. Let's create a sequent. Now install the Motion Graphics Template. To do this, go to the Graphics panel, click on the Install Motion Graphics Template and select our "Mogrt" file.

**4)** In the panel of Essential Graphics, our template appears. If you do not have this panel, go to Windows and check this box. Next, drag our project

to the timeline panel and in the warning panel select Change Settings

**5)** Now go to the Edit tab and configure the project parameters, after which you can output the project to the video format

Thank you for watching , have a nice day
